

Linguistics Collection

Index and full-text databases offering a one-stop shop for researching linguistics

The Linguistics Collection comprises index and full-text content covering all aspects of language study, including phonetics, phonology, morphology, syntax, and semantics. Complete coverage is given to various fields of linguistics, including descriptive, historical, comparative, theoretical, and applied linguistics.

The collection includes:

- Over 800,000 records from over 2,000 journals and over 50,000 dissertations
- Includes a thesaurus for precision searching that retrieves accurate, focused results.
- Delivers scholarly articles and dissertations published in the field.
 - Dissertations allow users to keep up with original research.
 - Articles cover global research from 1973 to current.
- Provides access to full-text journals, such as Foreign Language Annals, Journal of Child Language, and Journal of Psycholinguistic Research, including titles from:
 - Walter de Gruyter
 - Cambridge University Press
 - Springer Nature
 - Johns Hopkins University Press

Linguistics & Language Behavior Abstracts (LLBA)

- Provides abstracts and Indexing to the international literature in linguistics and related disciplines in the language sciences.
- LLBA assists both generalists and specialists in keeping abreast of cutting-edge developments in disciplines concerned with the nature and use of language.
- The LLBA thesaurus supports advanced researchers performing literature reviews and systematic reviews.

Subject areas include:

- Linguistics
- Descriptive linguistics
- Historical linguistics
- Comparative linguistics
- Theoretical linguistics
- Applied linguistics
